

NEW HORIZON COLLEGE OF ENGINEERING

Autonomous College Permanently Affiliated to VTU, Approved by AICTE & UGC
Accredited by NAAC with 'A' Grade, Accredited by NBA

The Trust is a Recipient of Prestigious Rajyotsava State Award 2012 Conferred by the Government of Karnataka

Awarded Outstanding Technical Education Institute in Karnataka

Ring Road, Bellandur Post, Near Marathalli, Bangalore -560 103, INDIA

Academic Year 2020-21

VISION

To create high quality engineering professionals who can serve the society and earn global recognition.

MISSION

- To build strong foundation in Electronics and Communication Engineering aspects by exposing students to state of the art technology and research.
- To strengthen the curriculum through interaction with industry experts to equip the students with the required competency.
- To mould students to share technical knowledge and to practice professional and moral values.

Program Education objectives (PEOs)

PEO1	To produce graduates with understanding of fundamentals and applications of Electronics and Communication Engineering.
PEO2	To hone graduates with ability to apply, analyze, design and develop electronic systems.
PEO3	To enhance graduates with latest technologies to enable them to engineer products for real world problems.
PEO4	To build leadership qualities, management skills, communication skills, moral values, team spirit and lifelong learning ability for the graduates.

PEO to Mission Statement Mapping

Mission Statements	PEO1	PEO2	PEO3	PEO4
To build strong foundation in Electronics and Communication Engineering aspects by exposing students to state of the art technology and research.	3	3	3	2
To strengthen the curriculum through interaction with industry experts to equip the students with the required competency.	2	3	3	2
To mould students to share technical knowledge and to practice professional and moral values.	1	2	2	3

Correlation: 3- High, 2-Medium, 1-Low

Program Outcomes (PO) with Graduate Attributes

	Graduate Attributes	Program Outcomes (POs)
1	Engineering knowledge	PO1: Apply the knowledge of mathematics, science, engineering fundamentals and an engineering specialization to the solution of complex engineering problems in Electronics and Communication Engineering.
2	Problem analysis	PO2: Identify, formulate, review research literature, and analyze complex engineering problems in Electronics and Communication Engineering reaching substantiated conclusions using first principles of mathematics, natural sciences, and engineering sciences.
3	Design/development of solutions	PO3: Design solutions for complex engineering problems and design system components or processes of Electronics and Communication Engineering that meet the specified needs with appropriate consideration for the public health and safety, and the cultural, societal, and environmental considerations.
4	Conduct investigations of complex problems	PO4: Use research-based knowledge and research methods including design of experiments in Electronics and Communication Engineering, analysis and interpretation of data, and synthesis of the information to provide valid conclusions.
5	Modern tool usage	PO5: Create, select, and apply appropriate techniques, resources, and modern engineering and IT tools including prediction and modeling to complex engineering activities in Electronics and Communication Engineering with an understanding of the limitations.
6	The engineer and society	PO6: Apply reasoning informed by the contextual knowledge to assess societal, health, safety, legal and cultural issues and the consequent responsibilities relevant to the professional engineering practice in Electronics and Communication Engineering.
7	Environment and sustainability	PO7: Understand the impact of the professional engineering solutions of Electronics and Communication Engineering in societal and environmental contexts, and demonstrate the knowledge of, and need for sustainable development.
8	Ethics	PO8: Apply ethical principles and commit to professional ethics and responsibilities and norms of the engineering practice.
9	Individual and team work	PO9: Function effectively as an individual, and as a member or leader in diverse teams, and in multidisciplinary settings.
10	Communication	PO10: Communicate effectively on complex engineering activities with the engineering community and with society at large, such as, being able to comprehend and write effective reports and design documentation, make effective presentations, and give and receive clear instructions.

11	Project management and finance	PO11: Demonstrate knowledge and understanding of the engineering and management principles and apply these to one's own work, as a member and leader in a team, to manage projects and in multidisciplinary environments.
12	Life-long learning	PO12: Recognize the need for, and have the preparation and ability to engage in independent and life-long learning in the broadest context of technological change.

Program Specific Outcomes

PSO1	To demonstrate the ability to design and develop complex systems in the areas of next generation Communication Systems, IoT based Embedded Systems, Advanced Signal and Image Processing, latest Semiconductor technologies, RF and Power Systems.
PSO2	To demonstrate the ability to solve complex Electronics and Communication Engineering problems using latest hardware and software tools along with analytical skills to contribute to useful, frugal and eco-friendly solutions.

Mapping of PEOs to POs & PSOs

FIFTH SEMESTER
(SYLLABUS)

Analog Communication

Course Code : 20ECE51
 L: T: P : 3:0:0
 Exam Hours : 3 Hrs

Credits : 3
 CIE Marks : 50
 SEE Marks : 50

Course Outcomes: At the end of the Course, the student will be able to:

CO1	Compare the Generation and Detection of Analog modulation techniques.
CO2	Apply the knowledge of Fourier transform and its properties for Analog modulation techniques.
CO3	Apply the concept of Hilbert transform to express the complex envelope of band pass signals.
CO4	Evaluate the Power consumption and Bandwidth utilization in Analog modulation techniques.
CO5	Analyze the effect of noise in Analog modulation systems.
CO6	Examine the statistical averages associated with random processes.

Mapping of Course Outcomes to Program Outcomes:

	PO1	PO2	PO3	PO4	PO5	PO6	PO7	PO8	PO9	PO10	PO11	PO12
CO1	3	3	3	-	-	-	-	-	-	-	-	-

MICROPROCESSORS

Course Code : 20ECE52

L: T: P : 3:0:0

Exam Hours : 03

Credits : 03

CIE Marks : 50

SEE Marks : 50

Course Outcomes: At the end of the Course, the student will be able to:

CO1	Explain the functional features of 8086 Microprocessor.
CO2	Apply the knowledge of addressing modes to write assembly language program in 8086.
CO3	Make use of assembler directives and interrupt methods in 8086 programming.
CO4	Examine the timing diagrams using minimum and maximum mode configuration of 8086.
CO5	Demonstrate the peripheral Interfacing concepts in 8086.
CO6	Appraise the architectural features of 8051 Microcontroller to develop assembly language program.

Mapping of Course Outcomes to Program Outcomes

CMOS VLSI DESIGN

Course Code : 20ECE53

L: T: P : 3:0:0

Exam Hours : 3

Credits : 3

CIE Marks : 50

SEE Marks : 50

Course Outcomes: At the end of the Course, the student will be able to:

CO1	Describe the basic concepts of MOSFET and its generic model.
CO2	Identify the process sequence for the fabrication of ICs and the relevant layout design rules.
CO3	Employ the delay model to the combinational MOS circuits.
CO4	Distinguish between the various combinational circuit designs that are in usage.
CO5	Examine the sequential circuits in terms of the delay constraints.
CO6	Evaluate the Combinational and Sequential Circuits in terms of timing.

Mapping of Course Outcomes to Program Outcomes:

	PO1	PO2	PO3	PO4	PO5	PO6	PO7	PO8	PO9	PO10	PO11	PO12

INFORMATION THEORY AND CODING

Course Code : 20ECE54

L: T: P : 3: 0: 0

Exam Hours : 3 hrs

Credits : 3

CIE Marks : 50

SEE Marks : 50

Course Outcomes: At the end of the Course, the student will be able to:

CO 1	Explain the nature of information and its measure using uncertainty and entropy
CO 2	Categorize the types of channel and compute their corresponding capacities
CO 3	Analyze the significance of source coding and channel coding techniques for digital communication systems
CO 4	Realize the coding and decoding techniques for digital communication design
CO 5	Evaluate the performance of source and channel coding techniques
CO 6	Estimate the error detection and correction capabilities of channel codes for error free communication

Engineering Electromagnetics

Course Code : 20ECE55

L: T: P : 2:1:0

Exam Hours : 3

Credits : 3

CIE Marks : 50

SEE Marks : 50

Course Outcomes: At the end of the Course, the student will be able to:

CO1	Apply vector concepts for laws and theorem in electric and magnetic fields.
CO2	Apply the static characteristics of electric and magnetic fields to various charge and current distribution.
CO3	Analyze the boundary characteristics of electric fields on various media.
CO4	Illustrate the concept of capacitance and inductance using electric and magnetic fields.
CO5	Categorize the Maxwell's Equations for static and time varying electromagnetic fields.
CO6	Analyze the characteristics of electromagnetic waves over various media.

Mapping of Course Outcomes to Program Outcomes:

REAL TIME SYSTEMS

Course Code : 20ECE561

L:P:T : 3:0:0

Exam Hours : 03

Credits : 03

CIE Marks : 50

SEE Marks : 50

Course Outcomes: At the end of the Course, the Student will be able to:

CO1	Understand the real-time system and its functions.
CO2	Apply formal methods for scheduling functions within the real-time systems.
CO3	Analyze the design patterns and program structures of RTS.
CO4	Appraise the choice of database requirements and communication methods for RTS.
CO5	Appraise the design and development framework of RTS.
CO6	Select suitable methodology to increase the efficiency of Real-Time systems.

Mapping of Course Outcomes to Program Outcomes:

SEMICONDUCTOR DEVICE PHYSICS

Course Code : 20ECE562
 L: T: P : 3:0:0
 Exam Hours : 3 Hrs

Credits : 3
 CIE Marks : 50
 SEE Marks : 50

Course Outcomes: At the end of the Course, the student will be able to:

CO1	Describe the principles and fundamentals of semiconductor, along with the crystal structures of semiconductor devices.
CO2	Explain the principles of atomic structure and its formulation by using the basics of Quantum mechanics.
CO3	Analyze the fabrication process of PN junction diode and its qualitative analysis.
CO4	Illustrate the formulation of BJT operation, and the different current mechanisms in transistors.
CO5	Distinguish between the different models for the transistors at low and high frequencies.
CO6	Examine the MOSFET operations, characteristics and second order effects of MOSFET.

MICROCONTROLLER

Course Code : 20ECE565
 L: T: P : 3-0-0
 Exam Hours : 03

Credits : 03
 CIE Marks : 50
 SEE Marks : 50

Course Outcomes: At the end of the Course, the student will be able to :

CO1	Understand the function features of PIC microcontroller.
CO2	Interpret the instruction sets of PIC 18 Microcontroller.
CO3	Develop Assembly level codes for the controllers.
CO4	Write the high level programs for PIC18 using Embedded C.
CO5	Demonstrate the interfacing program using Embedded C.
CO6	Apply the knowledge gained in PIC microcontroller in developing minor and major projects.

Mapping of Course Outcomes to Program Outcomes:

ROUTING AND SWITCHING-01

Course Code : 20ECE566

L: T: P : 3:0:0

Exam Hours : 03

Credits : 3

CIE Marks : 50

SEE Marks : 50

Course Outcomes: At the end of the Course, the student will be able to:

CO1	Compare the network models and the protocols at each layer
CO2	Construct IP addressing table and perform subnetting in IPv4 and IPv6 network.
CO3	Analyze the network to implement LAN security to mitigate threats and attack
CO4	Design logically separate networks using Virtual LANs and IEEE802.1Q trunking protocol.
CO5	Examine the operation of Spanning tree protocols and Etherchannel for network scalability
CO6	Analyze Dynamic Host Configuration Protocol (DHCP) operation for scalable networks.

MICROPROCESSORS LAB

Course Code : 20ECL57

L: T: P : 0:0:1.5

Exam Hours : 3

Credits : 1.5

CIE Marks : 25

SEE Marks : 25

Course Outcomes: At the end of the Course, the student will be able to:

CO1	Write assembly level programs using 8086 to perform arithmetic and logical operations.
CO2	Apply the knowledge of computer number system to write code conversion programs in 8086.
CO3	Develop assembly code for string operations, sorting of numbers and branch instructions of 8086.
CO4	Demonstrate the I/O interfacing of 8086 with peripheral devices.
CO5	Write 8051 assembly level programs to perform arithmetic and logical operations.
CO6	Demonstrate the interfacing of 8051 with stepper motor, switches, LCD & LED modules.

Mapping of Course Outcomes to Program Outcomes:

	PO1	PO2	PO3	PO4	PO5	PO6	PO7	PO8	PO9	PO10	PO11	PO12

CO6	3	3	3	2	3	-	-	-	3	-	2	2

Sl.No.	LIST OF EXPERIMENTS	COs
1	Write an assembly level programs for basic arithmetic operations using 8086 (i) Signed and Unsigned Addition (ii) Subtraction (iii) Signed and Unsigned Multiplication (iv) Signed and Unsigned Division	CO1
2	Write an assembly level programs assembly level programs for basic logical operation using 8086 (i)To check number is positive or negative (ii)To count number of one's & zero's	CO1
3	Write an assembly Level programs for code conversion of 8086 (i) ASCII to binary; (ii) Decimal to Hex; (iii) ASCII to Decimal; (iv) Binary to BCD and vice versa	CO2
4	Write an assembly level programs for String operations using 8086 (i) Reverse the string (ii) To check whether the string is palindrome or not	CO3
5	Write an assembly level programs using 8086 for sorting operations like ascending, descending, largest and smallest in microprocessor	CO3
6	Interfacing of 8086 with (Assembly Level Programming) i) Stepper motor i) Seven segment Display ii) Logic controller (BCD up counter and Down counter) iii) Keyboard Display Interface	CO4
7	Write a assembly level program for basic arithmetic and logical operations in 8051 microcontroller.	CO5
8	Assembly Level Programming to illustrate the interfacing of stepper motor, switches, LCD & LED modules with the microcontroller 8051.	CO6

CMOS VLSI DESIGN LAB

Course Code : 20ECL58

L: T: P : 0:0:1.5

Exam Hours : 3

Credits : 1.5

CIE Marks : 25

SEE Marks : 25

Course Outcomes: At the end of the Course, the student will be able to:

CO1	Demonstrate the working of analog and digital CMOS circuits through SPICE simulation.
CO2	Use the schematics of CMOS circuits to construct and verify their layouts.
CO3	Employ the Switch level description of digital CMOS circuits for simulation using Verilog.
CO4	Employ the Gate level description of digital CMOS circuits for simulation and synthesis.
CO5	Operate the selected combinational and sequential circuits with the timing constraints.
CO6	Compare the various amplifier circuits in terms of gain, bandwidth and phase response.

Mapping of Course Outcomes to Program Outcomes:

	PO1	PO2	PO3	PO4	PO5	PO6	PO7	PO8	PO9	PO10	PO11	PO12

(SYLLABUS)

DIGITAL COMMUNICATION

Course Code : 20ECE61
 L: T: P : 3:0:0
 Exam Hours : 3

Credits : 3
 CIE Marks : 50
 SEE Marks : 50

Course Outcomes: At the end of the Course, the student will be able to:

CO1	Apply the fundamentals of digital Communication for baseband signal processing and coding.
CO2	Analyze the pulse shaping mechanism for distortion less base-band binary transmission.
CO3	Categorize digital modulation techniques based on Bit Error Rate performance.
CO4	Estimate the signal in presence of noise by appropriate receiver design.
CO5	Identify digital modulation techniques for radio and satellite communication.
CO6	Compare the spread spectrum techniques available for secured communication.

MICROELECTRONIC CIRCUITS

Course Code : 20ECE63
 L: T: P : 3-0-0
 Exam Hours : 03

Credits : 03
 CIE Marks : 50
 SEE Marks : 50

Course Outcomes: At the end of the Course, the student will be able to:

CO1	Analyze the biasing techniques for the operation of MOSFET.
CO2	Use small signal models for MOSFET configurations.
CO3	Design CS amplifier configuration for real time applications and societal requirements.
CO4	Determine the gain and bandwidth of MOS amplifier circuits using high frequency response.
CO5	Evaluate the performance of current mirror circuits in MOS amplifier.
CO6	Appraise the differential pair configuration in amplifier circuits to achieve the target specifications.

Mapping of Course Outcomes to Program Outcomes:

	PO1	PO2	PO3	PO4	PO5	PO6	PO7	PO8	PO9	PO10	PO11	PO12
CO1	3	3	3	-	-	-	-	-	-	-	-	-

MICROWAVES & RADAR

Course Code : 20ECE641
 L: T: P : 3-0-0
 Exam Hours : 03

Credits : 03
 CIE Marks : 50
 SEE Marks : 50

Course Outcomes: At the end of the Course, the student will be able to:

CO1	Categorize the radiation effects associated with RF sources.
CO2	Analyze the behavior and characteristics of microwave active components.
CO3	Solve the transmission line problems using analytical and graphical approach.
CO4	Apply the knowledge of low frequency network to express Scattering parameter for impedance matching.
CO5	Analyze the working principle of microwave multiport junctions.
CO6	Select RADAR systems for the prediction of stationary and non-stationary clutter.

Mapping of Course Outcomes to Program Outcomes:

NANOELECTRONICS

Course Code : 20ECE642
 L: T: P : 3 : 0 : 0
 Exam Hours : 3 hours

Credits : 3
 CIE Marks : 50
 SEE Marks : 50

Course Outcomes: At the end of the Course, the student will be able to:

CO1	Know the basic engineering science and technical knowledge of Nanoelectronics.
CO2	Understand the underlying principles of Quantum Mechanics and its role in Nano electronic devices.
CO3	Appraise the electromechanical properties of Nano structures.
CO4	Analyze the aspects of nanotechnology and processes involved in fabricating Nano devices.
CO5	Identify the nature of Carbon bond and the various Nano structures of Carbon.
CO6	Leverage the understanding of technologies used modern day electronic devices, such as sensors.

Mapping of Course Outcomes to Program Outcomes:

DIGITAL SWITCHING SYSTEMS

Course Code : 20ECE643
 L: T: P : 3:0:0
 Exam Hours : 3

Credits : 03
 CIE Marks : 50
 SEE Marks : 50

Course Outcomes: At the end of the Course, the student will be able to:

CO1	Recall the fundamental concepts of telecommunications.
CO2	Describe the evolutions of switching systems.
CO3	Demonstrate the knowledge of digital switching system and its model.
CO4	Model the telecommunications traffic measurement.
CO5	Examine the methods of grading and Time Division switching.
CO6	Apply the knowledge for the design and maintenance of switching system software.

AUTOMOTIVE ELECTRONICS

Course Code : 20ECE644
 L: T: P : 3 : 0 : 0
 Exam Hours : 3 hours

Credits : 3
 CIE Marks : 50
 SEE Marks : 50

Course Outcomes: At the end of the Course, the student will be able to:

CO1	Acquire an overview of automotive components, subsystems, and basics of Electronic Engine Control in today's automotive industry.
CO2	Comprehend dashboard electronics and engine system electronics
CO3	Identify various physical parameters that are to be sensed and monitored for maintaining the stability of the vehicle under dynamic conditions.
CO4	Implement the controls and actuator system pertaining to the comfort and safety of commuters.
CO5	Analyze the networking of various modules in automotive systems, communication protocols and diagnostics of the sub systems.
CO6	Gain insight about building future automotive subsystems that contributes to the safety and health of the society

IOT AND WIRELESS SENSOR NETWORK

Course Code : 20ECE645

L: T: P : 3:0:0

Exam Hours : 3

Credits : 3

CIE Marks : 50

SEE Marks : 50

Course Outcomes: At the end of the Course, the student will be able to:

CO1	Illustrate the architecture and design principles of IoT and WSN networks.
CO2	Compare IoT & M2M communication protocols.
CO3	Identify different data collection and storage methods using cloud model.
CO4	Classify the Communication Protocols for WSN network at different layers.
CO5	Identify the tools and software platforms for WSN and IoT networks.
CO6	Develop an IoT and WSN application and engage in lifelong learning by assessing the network performance.

MULTIMEDIA COMMUNICATION

Course Code : 20ECE646
 L: T: P : 3:0:0
 Exam Hours : 3

Credits : 3
 CIE Marks : 50
 SEE Marks : 50

Course Outcomes: At the end of the Course, the student will be able to:

CO1	Develop the basics of multimedia communication.
CO2	Identify various media types to represent them in digital form.
CO3	Apply distinct compression techniques to compress text and images.
CO4	Apply different types of compression techniques to compress audio and video.
CO5	Analyze the varied features of Distributed Multimedia systems.
CO6	Examine the knowledge about multimedia communication across different networks.

Mapping of Course Outcomes to Program Outcomes:

REAL TIME OPERATING SYSTEMS

Course Code : 20ECE651
L:T:P : 3:0:0
Exam Hours : 03

Credits : 03
CIE Marks : 50
SEE Marks : 50

Course Outcomes: At the end of the Course, the Student will be able to:

CO1	Describe the functions of real-time operating systems
CO2	Analyze the concepts of Real Time operating Systems
CO3	Choose the Real time operating system requirements for design issues
CO4	Analyze the design parameters and program structure of RTOS
CO5	Appraise interaction between multiple tasks in exploiting concurrency
CO6	Evaluate common design problems for frugal solutions

Mapping of Course Outcomes to Program Outcomes:

Module no	Contents of Module	Hrs	COs
1	Review of Operating Systems – What operating systems do, Operating System Structure, Operating-System Operations, Process Management, Memory Management, Storage Management, Protection and Security Review of Real Time Embedded Systems -Real-Time Systems, Characteristics of Real Time Systems, Hard and Soft Real Time Systems. (Text book 1: 1.1,1.4 to 1.9; Text book 2: 1.2) Case study: Practical Real Time System	9	CO1,CO2
2	Introduction to Real-Time Operating Systems: A Brief History of Operating Systems, Defining an RTOS, The Scheduler, Objects,	9	CO1, CO2, CO3

	Services, Key Characteristics of an RTOS. Tasks: Defining a Task, Task States and Scheduling, Typical Task Operations, Typical Task Structure, Synchronization, Communication, and Concurrency. (Text book 2: 4.1 to 4.7, 5.2 to 5.6)		
3	Real Time Kernel Objects- Semaphores: Defining Semaphores, Typical, Operations, Typical Semaphore Use. Message queues: Defining Message Queues, Message Queue States, Message Queue Content, Message Queue Storage, Typical Message Queue Operations, Typical Message Queue Use. (Text book 2: 6.2 to 6.4, 7.2 to 7.7)	9	CO4, CO5
4	RTOS Design Considerations- I/O sub system: Basic I/O Concepts, The I/O Sub system. Memory Management: Dynamic Memory Allocation, Fixed-Size Memory Management, Blocking vs. Non-Blocking Memory Functions, Hardware Memory Management Units (Text book 2: 12.1 to 12.3,13.1 to 13.5)	9	CO4
5	Tasks Communication and Synchronization- Synchronization, Communication, Resource Synchronization Methods, Common Practical Design Patterns. Common Design Problems: Resource Classification, Deadlocks, Priority inversion. Case study: Features of commercial RTOS :MicroC/OS-II and VxWorks (Text book 2: 15.2 to 15.4,15.6,16.2 to 16.4)	9	CO5, CO6

Text Books:

1. Operating System Concepts , Abraham Silberschatz, Peter Baer Galvin, Burlington, Greg Gagne, 9th edition, 2012, Wiley Global Education.
2. Real-Time Concepts for Embedded Systems, Qing Li with Caroline Yao, 2011, CMP Books.

Reference books:

ANALOG AND MIXED MODE VLSI DESIGN

Course Code : 20ECE652
 L:T:P : 3:0:0
 Exam Hours : 03

Credits : 04
 CIE Marks : 50
 SEE Marks : 50

Course Outcomes: At the end of the Course, the Student will be able to:

CO1	Recall the basics of Analog-to-Digital Conversion and vice versa.
CO2	Discuss the different architectures of ADCs and DACs.
CO3	Evaluate the challenges associated with process changes for the submicron layout.
CO4	Employ the designs of resistors and capacitors for the submicron processes.
CO5	Employ the op-amp design criteria for the submicron dimensions.
CO6	Analyze various non-linear analog circuits.

Mapping of Course Outcomes to Program Outcomes:

COMPUTER COMMUNICATION NETWORKS

Course Code : 20ECE653

L: T: P : 3:0:0

Exam Hours : 3

Credits : 3

CIE Marks : 50

SEE Marks : 50

Course Outcomes: At the end of the Course, the student will be able to:

CO1	Identify the basic network characteristics and models
CO2	Classify the addressing schemes at different layers
CO3	Compare the standards associated with Ethernet protocol
CO4	Illustrate the Wireless LAN characteristics and its architecture
CO5	Analyze the routing of packets and the path cost using different routing algorithms
CO6	Examine the protocols and functions associated with various layers and their use in scaling networks

PROGRAMMING WITH DATA STRUCTURES AND OOP

Course Code : 20ECE655

L: T: P : 3:0:0

Exam Hours : 3

Credits : 3

CIE Marks : 50

SEE Marks : 50

Course Outcomes: At the end of the Course, the student will be able to:

CO1	Use basic data structures like stacks and queues to solve real time problems efficiently
CO2	Usage of linked lists, objects, classes, constructors and destructors to reduce the complexity in programming
CO3	Identify the operator to be overloaded to redefine the way they work for user-defined data types
CO4	Examine when exceptions are called and apply the exception mechanisms
CO5	Distinguish between the inheritance types and apply them in real time applications
CO6	Build projects to investigate and resolve real time problems using data structures, linked lists and OOP concepts

Mapping of Course Outcomes to Program Outcomes:

	PO1	PO2	PO3	PO4	PO5	PO6	PO7	PO8	PO9	PO10	PO11	PO12

POWER ELECTRONICS

Course Code : 20ECE656

L: T: P : 3:0:0

Exam Hours : 3

Credits : 3

CIE Marks : 50

SEE Marks : 50

Course Outcomes: At the end of the Course, the student will be able to:

CO1	Analyze power semiconductor devices in power electronics applications
CO2	Investigate the protection, gating and commutation circuits.
CO3	Evaluate the types of power converters for suitable power electronics applications
CO4	Choose suitable harmonic reduction methods to improve the converter performance
CO5	Analyze the performance of power converters on appropriate EDA tools
CO6	Design power converters for industrial applications

Mapping of Course Outcomes to Program Outcomes:

	PO1	PO2	PO3	PO4	PO5	PO6	PO7	PO8	PO9	PO10	PO11	PO12

COMMUNICATION LAB

Course Code : 20ECL66
 L: T: P : 0:0:1.5
 Exam Hours : 3

Credits : 1.5
 CIE Marks : 25
 SEE Marks : 25

Course Outcomes: At the end of the Course, the student will be able to:

CO1	Design analog and digital modulation techniques
CO2	Demonstrate the radiation pattern of micro strip antennas
CO3	Experiment with the microwave devices to obtain performance parameters
CO4	Model an optical communication system and analyze its characteristics
CO5	Apply multiplexing and demultiplexing for band limited signals
CO6	Simulate line codes for binary baseband signaling

Mapping of Course Outcomes to Program Outcomes:

Sl. No.	LIST OF EXPERIMENTS	COs
1	Generation and detection of Amplitude modulation technique using transistor/FET	CO1
2	(a) Generation and detection of Frequency modulation technique using IC 8038/2206. (b) Demonstrate Frequency synthesis using PLL	CO1
3	Realize Time Division Multiplexing and Demultiplexing of two band limited signals	CO5
4	Generation and detection of ASK	CO1
5	Generation and detection of FSK	CO1
6	Generation and detection of PSK	CO1
7	Generation and detection of Pulse Code Modulation using CODEC.	CO1
8	Measurement of directivity and gain of microstrip dipole and Yagi antennas.	CO2, CO3
9	Determination of (a) Coupling and isolation characteristics of microstrip directional coupler. (b) Resonance characteristics of microstrip ring resonator and computation of dielectric constant of the substrate. (c) Power division and isolation of microstrip power divider.	CO3
10	Measurement of frequency, guide wavelength, power, VSWR and attenuation in microwave test bench.	CO3
11	Measurement of propagation loss, bending loss and numerical aperture of an optical fiber.	CO4
12	Simulation of NRZ,RZ Half Sinusoid and Raised Cosine Pulses and generate eye diagram for binary polar signaling using MATLAB/SIMULINK	CO6

EMBEDDED SYSTEM DESIGN LAB

Course Code : 20ECL67
 L: T: P : 0: 0: 1.5
 Exam Hours : 3

Credits : 1.5
 CIE Marks : 50
 SEE Marks : 50

Course Outcomes: At the end of the Course, the student will be able to:

CO1	Conduct experiments to understand data transfer and memory access instructions
CO2	Construct the code for data processing using Arm instructions
CO3	Write code for given applications using bit field and process control instructions
CO4	Develop code for DSP applications using saturation and floating point operations
CO5	Use embedded C code to demonstrate peripheral interfacing with ARM development board
CO6	Construct interrupt operations for specific applications

Mapping of Course Outcomes to Program Outcomes:

	PO1	PO2	PO3	PO4	PO5	PO6	PO7	PO8	PO9	PO10	PO11	PO12

Sl. No.	LIST OF EXPERIMENTS	COs
CYCLE 1 Experiments		
1.	Program involving instructions for transferring data within the processor	CO1
2.	ALP to demonstrate memory access instruction for various data sizes and addressing modes.	
3.	Program involving arithmetic data operations	CO2
4.	Program involving logic operations	
5.	Program involving data conversion operations(extend and reverse ordering)	
6.	Program involving shift and rotate operations	
7.	Program to illustrate bit field processing instruction	CO3
8.	Program to illustrate program flow instruction.	
9.	Program to illustrate saturation operation	CO4
10	Programs involving floating point operations	
CYCLE 2 EXPERIMENTS		
11)	Interfacing and programming GPIO ports in embedded C ARM Development Board	CO5
a)	Program for Blinking of a LED without delay	
b)	Write a Program for Blinking of a LED with delay	
c)	Program to turn the LED ON when the button is pressed and OFF when it is released	
12)	Generation of PWM signals for different duty cycles	
13)	Embedded C program to demonstrate serial communication using ARM Cortex development board.	
14)	Demonstrate interrupt operations using Embedded C program	CO6
a)	Timers	
b)	Stopwatch	

Note: 1) Programming to be done using keiluvision 4 or 5 and download the program on to a M4.Evaluation board such as STM32F nucleon boards, Tiva C series board.

2) Experiments from 1 to 10 should include at least 2 to 4 programs each.

ROUTING AND SWITCHING-01

Course Code :NHOP09
 L: T: P :3:0:0
 Exam Hours :3

Credits : 3
 CIE Marks : 50
 SEE Marks : 50

Course Outcomes: At the end of the Course, the student will be able to:

CO1	Compare the network models and the protocols at each layer
CO2	Construct IP addressing table and perform subnetting in IPv4 and IPv6 network.
CO3	Analyze the network to implement LAN security to mitigate threats and attack
CO4	Design logically separate networks using Virtual LANs and IEEE802.1Q trunking protocol.
CO5	Examine the operation of Spanning tree protocols and Etherchannel for network scalability
CO6	Analyze Dynamic Host Configuration Protocol (DHCP) operation for scalable networks.

Mapping of Course Outcomes to Program Outcomes:

ROUTING AND SWITCHING - 02

Course Code : NHOP12
 L: T: P : 3:0:0
 Exam Hours : 3

Credits : 3
 CIE Marks : 50
 SEE Marks : 50

Course Outcomes: At the end of the Course, the Student will be able to:

CO1	Describe and Configure VLANs to create logically separate networks and understand routing between VLAN
CO2	Discuss the operations and benefits of Dynamic Host Configuration Protocol (DHCP) and for IPv4 and IPv6
CO3	Configure, monitor, and troubleshoot ACLs and NAT for IPv4 and IPv6
CO4	Describe, Configure and troubleshoot link aggregation and Cisco VLAN Trunk Protocol (VTP), STP, and RSTP
CO5	Describe, Configure and troubleshoot link aggregation, Ether Channel, HSRP
CO6	Configure and troubleshoot basic operations of routers in a complex routed network for IPv4 and IPv6 – EIGRP

SYLLABUS			
Sl No	Contents of Module	Hours	COs
1	<p><u>Introduction to VLAN and DHCP:</u> Virtual LAN: VLAN Segmentation, VLAN Implementations, Inter-VLAN Routing Using Routers, Troubleshoot VLAN, Dynamic Host Configuration Protocol: DHCPv4 ,DHCPv6, Troubleshoot DHCP</p> <p><u>Hands On:</u> Configure a switch port to be assigned to a VLAN based on requirements. Configure a trunk port on a LAN switch. Configure legacy Inter-VLAN Routing Configure Router-on-a-Stick Inter-VLAN Routing Configure and troubleshoot a router as a DHCPv4 server. Configure a router as a DHCPv4 client. Configure stateless DHCPv6 for a small to medium-sized business. Configure stateful DHCPv6 for a small to medium-sized business.</p>	9	CO1, CO2
2	<p><u>Access Control Lists and NAT:</u> Access Control List : ACL Operation, Standard IPv4 ACLs, Troubleshoot ACLs, NAT:NAT Operation, Configure NAT, Troubleshoot NAT, Device Discovery, Device Management, Device Maintenance</p> <p><u>Hands On:</u> Configure standard IPv4 ACLs to filter traffic to meet networking requirements. Configure a standard ACL to secure VTY access. Configure static NAT using the CLI. Configure dynamic NAT using the CLI. Configure PAT using the CLI. Configure port forwarding using the CLI.</p>	9	CO3
3	<p><u>LAN Design, Scaling VLAN & Spanning tree Protocol:</u> LAN Design: Campus Wired LAN Designs, Campus Network Device Selection, Scaling VLAN :VTP, Extended VLANs, and DTP, Troubleshoot Multi-VLAN Issues, Layer 3 Switching, Spanning Tree Concepts, Varieties of Spanning Tree Protocols, Spanning Tree Configuration.</p> <p><u>Hands On:</u> Configure extended VLANs. Configure Dynamic Trunking Protocol (DTP). Configure Inter-VLAN routing using Layer 3 switching. Troubleshoot Inter-VLAN routing in a Layer 3 switched environment. Configure PVST+ in a switched LAN environment. Configure Rapid PVST+ in a switched LAN environment.</p>	9	CO4

4	<p>Ether Channel, HSRP & Dynamic Routing: Link Aggregation Concepts, Link Aggregation Configuration, First Hop Redundancy Protocols, Distance Vector Dynamic Routing, Link-State Dynamic Routing</p> <p>Hands On: Configure link aggregation. Troubleshoot Link aggregation Configure EtherChannel Troubleshoot EtherChannel Configure and troubleshoot HSRP using Cisco IOS commands.</p>	9	CO5
5	<p>Introduction to EIGRP: EIGRP Characteristics, Implement EIGRP for IPv4, EIGRP Operation, Implement EIGRP for IPv6, Tune EIGRP, Troubleshoot EIGRP</p> <p>Hands On: Configure EIGRP for IPv4 in a small routed network. Verify EIGRP for IPv4 operation in a small routed network. Configure EIGRP for IPv6 in a small routed network. Verify EIGRP for IPv6 implementation in a small routed network. Configure EIGRP auto summarization. Configure a router to propagate a default route in an EIGRP network. Configure EIGRP interface settings to improve network performance. Troubleshoot neighbor adjacency issues in an EIGRP network. Troubleshoot missing route entries in an EIGRP routing table .</p>	9	CO6

APPENDIX A

Outcome Based Education

Outcome-based education (OBE) is an educational theory that bases each part of an educational system around goals (outcomes). By the end of the educational experience each student should have achieved the goal. There is no specified style of teaching or assessment in OBE; instead classes, opportunities, and assessments should all help students achieve the specified outcomes.

There are three educational Outcomes as defined by the National Board of Accreditation:

Program Educational Objectives: The Educational objectives of an engineering degree program are the statements that describe the expected achievements of graduate in their career and also in particular what the graduates are expected to perform and achieve during the first few years after graduation. [nbaindia.org]

Program Outcomes: What the student would demonstrate upon graduation. Graduate attributes are separately listed in Appendix C

Course Outcome: The specific outcome/s of each course/subject that is a part of the program curriculum. Each subject/course is expected to have a set of Course Outcomes

Mapping of Outcomes

APPENDIX B

The Graduate Attributes of NBA

Engineering knowledge: Apply the knowledge of mathematics, science, engineering fundamentals, and an engineering specialization to the solution of complex engineering problems.

Problem analysis: Identify, formulate, research literature, and analyse complex engineering problems reaching substantiated conclusions using first principles of mathematics, natural sciences, and engineering sciences.

Design/development of solutions: Design solutions for complex engineering problems and design system components or processes that meet the specified needs with appropriate consideration for the public health and safety, and the cultural, societal, and environmental considerations.

Conduct investigations of complex problems: The problems that cannot be solved by straightforward application of knowledge, theories and techniques applicable to the engineering discipline that may not have a unique solution. For example, a design problem can be solved in many ways and lead to multiple possible solutions that require consideration of appropriate constraints/requirements not explicitly given in the problem statement (like: cost, power requirement, durability, product life, etc.) which need to be defined (modeled) within appropriate mathematical framework that often require use of modern computational concepts and tools.

Modern tool usage: Create, select, and apply appropriate techniques, resources, and modern engineering and IT tools including prediction and modelling to complex engineering activities with an understanding of the limitations.

The engineer and society: Apply reasoning informed by the contextual knowledge to assess societal, health, safety, legal, and cultural issues and the consequent responsibilities relevant to the professional engineering practice.

Environment and sustainability: Understand the impact of the professional engineering solutions in societal and environmental contexts, and demonstrate the knowledge of, and need for sustainable development.

Ethics: Apply ethical principles and commit to professional ethics and responsibilities and norms of the engineering practice.

Individual and team work: Function effectively as an individual, and as a member or leader in diverse teams, and in multidisciplinary settings.

Communication: Communicate effectively on complex engineering activities with the engineering community and with society at large, such as, being able to comprehend and write effective reports and design documentation, make effective presentations, and give and receive clear instructions.

Project management and finance: Demonstrate knowledge and understanding of the engineering and management principles and apply these to one's own work, as a member and leader in a team, to manage projects and in multidisciplinary environments.

Life-long learning: Recognise the need for, and have the preparation and ability to engage in independent and life-long learning in the broadest context of technological change.

APPENDIX C

BLOOM'S TAXONOMY

Bloom's taxonomy is a classification system used to define and distinguish different levels of human cognition—i.e., thinking, learning, and understanding. Educators have typically used Bloom's taxonomy to inform or guide the development of assessments (tests and other evaluations of student learning), curriculum (units, lessons, projects, and other learning activities), and instructional methods such as questioning strategies.
